

# ACKNOWLEDGMENTS

The primary authors of Chapter 1 of the Conservation Strategy were Tom Carlsen (Montana Fish, Wildlife and Parks) and Glenn Erickson. Wildlife management biologists for Montana Fish, Wildlife and Parks (FWP) from across the state produced the individual management plans found in Chapter 2 for each bighorn sheep population. Neil Anderson (FWP) wrote portions of the Health section. The section on Genetics was provided by Gordon Luikart (University of Montana). Initial editing was by Tom Carlsen and Tom Palmer (FWP). Wayne Klinkel provided the design layout for the document with final proofreading and editing by Ann Seifert and final layout by Connie Lere (FWP). A special thanks to Dr. James Bailey for thorough review of the entire strategy and the valuable comments provided from that effort. Adam Messer (FWP) produced the maps and conducted the GIS analysis for habitat

evaluation. Justin Gude (FWP) provided assistance in model development for harvest management. Ken Hamlin (FWP) offered valuable comments on the Population Monitoring and Management sections. Fred Jakubowski (FWP) provided support in many ways, which made this effort possible. Marjorie Smith with the Montana State Library was very helpful in acquiring literature from a wide variety of sources. Terry Lonner (Media Works, Bozeman, MT) provided the cover photo. Other photos were provided by Brent Lonner (FWP), Andrew McKean (FWP), and Tom Carlsen. Quentin Kujala, Wildlife Management Bureau Chief, supervised the development of the conservation strategy and provided constructive support throughout that process. Funding for this project was provided by FWP, Pittman-Robertson Wildlife Restoration program, and the Montana Wild Sheep Foundation.
